WHAT'S NEW FOR RECONCILOR 9.1

Reconcilor embeds and integrates the knowledge from our mining engineers, geologists, metallurgists and planners and when it is used to standardise operations across multiple sites, it enables sophisticated analysis and guidance to trouble-shoot and optimise multiple sites.

Snowden's Reconcilor has been developed to deliver this as a COTS (Commercial Off-the-Shelf) offering, with the added potential to enhance or supersede the existing functionality present in earlier versions of the product. Reconcilor assists key stakeholders on site and at head office to quickly see how operations are performing, get early notification of any issues and take action to resolve them.

This is a **major version** update for Reconcilor. It presents a brand-new "Grade Block" module, (naming to be determined by individual Site Administrators) which allows users to compare design, haulage and survey of a distinct grade block both graphically and with underlying material movements. Another major feature of this release is the ability for users to be automatically created and assigned roles using AD groups.

Performance enhancements have been implemented across the analysis and management modules. Snowden is committed to improving performance where required on every Reconcilor release.

NEW FEATURES

Block Module

The blocks module provides users the ability to compare model estimates for each grade block, against survey and haulage movements.

The name of the screens that are listed under the blocks module can be configured in System Settings>Implementation Detail.

An example of custom naming (free text) is shown below:

Implementation Detail

 Save  Cancel

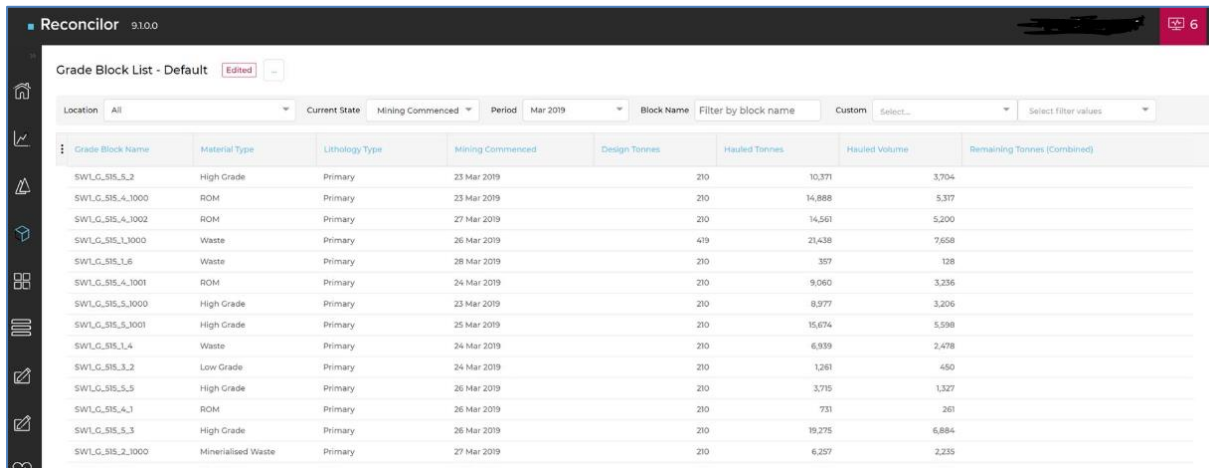

Grade Block Module Main Menu Display Name	<input type="text" value="Grade Block Main"/>
Grade Block Module Sub Menu Display Name	<input type="text" value="CB Sub"/>

The Blocks Module will display directly below the Stockpiles Module on the main menu list.

The Blocks Module can have system changes to it through System Settings / Application Settings / Grade block Settings.

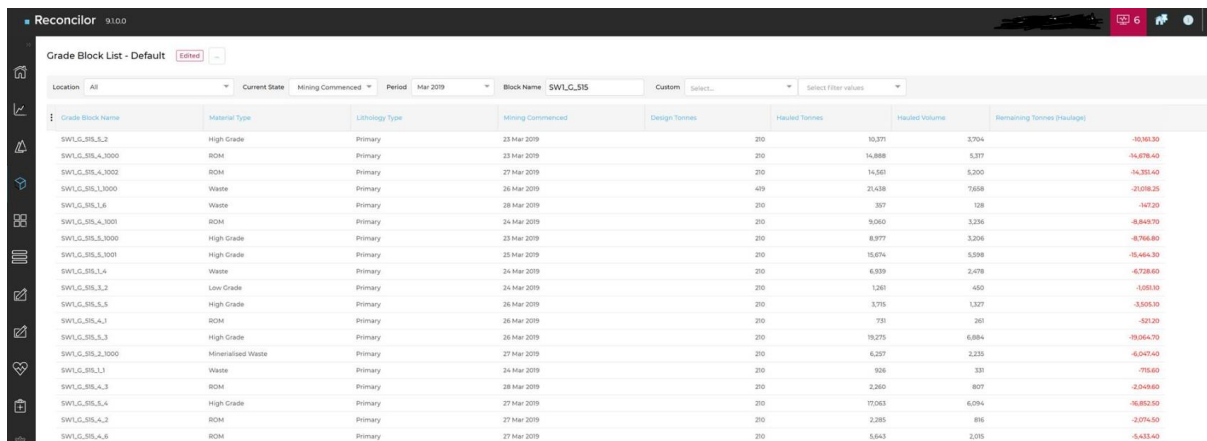

The Blocks list gives an overview of all grade blocks loaded into Reconcilor.

It is a requirement that the filtered along the top of the screen are used to return the grade block of interest. The following filters are available:

Grade Block Name	Material Type	Lithology Type	Mining Commenced	Design Tonnes	Hauled Tonnes	Hauled Volume	Remaining Tonnes (Combined)
SWL_G_SIS_5_3	High Grade	Primary	23 Mar 2019	210	10,371	3,704	
SWL_G_SIS_4_1000	ROM	Primary	23 Mar 2019	210	14,888	5,317	
SWL_G_SIS_4_1002	ROM	Primary	27 Mar 2019	210	14,561	5,200	
SWL_G_SIS_1_1000	Waste	Primary	26 Mar 2019	419	21,438	7,658	
SWL_G_SIS_1_6	Waste	Primary	28 Mar 2019	210	357	128	
SWL_G_SIS_4_1001	ROM	Primary	24 Mar 2019	210	9,060	3,236	
SWL_G_SIS_5_1000	High Grade	Primary	23 Mar 2019	210	8,977	3,206	
SWL_G_SIS_5_1001	High Grade	Primary	25 Mar 2019	210	15,674	5,598	
SWL_G_SIS_1_4	Waste	Primary	24 Mar 2019	210	6,939	2,478	
SWL_G_SIS_3_2	Low Grade	Primary	24 Mar 2019	210	1,261	450	
SWL_G_SIS_5_5	High Grade	Primary	26 Mar 2019	210	3,715	1,327	
SWL_G_SIS_4_1	ROM	Primary	26 Mar 2019	210	731	261	
SWL_G_SIS_5_3	High Grade	Primary	26 Mar 2019	210	19,275	6,884	
SWL_G_SIS_2_1000	Mineralised Waste	Primary	27 Mar 2019	210	6,257	2,235	

Figure 1 Block list returned using Current state, period and partial block name

Grade Block Name	Material Type	Lithology Type	Mining Commenced	Design Tonnes	Hauled Tonnes	Hauled Volume	Remaining Tonnes (Hauled)
SWL_G_SIS_5_3	High Grade	Primary	23 Mar 2019	210	10,371	3,704	-10,361.30
SWL_G_SIS_4_1000	ROM	Primary	23 Mar 2019	210	14,888	5,317	-14,878.40
SWL_G_SIS_4_1002	ROM	Primary	27 Mar 2019	210	14,561	5,200	-14,351.40
SWL_G_SIS_1_1000	Waste	Primary	26 Mar 2019	419	21,438	7,658	-21,018.25
SWL_G_SIS_1_6	Waste	Primary	28 Mar 2019	210	357	128	-147.20
SWL_G_SIS_4_1001	ROM	Primary	24 Mar 2019	210	9,060	3,236	-8,848.70
SWL_G_SIS_5_1000	High Grade	Primary	23 Mar 2019	210	8,977	3,206	-8,766.80
SWL_G_SIS_5_1001	High Grade	Primary	25 Mar 2019	210	15,674	5,598	-15,464.30
SWL_G_SIS_1_4	Waste	Primary	24 Mar 2019	210	6,939	2,478	-6,728.60
SWL_G_SIS_3_2	Low Grade	Primary	24 Mar 2019	210	1,261	450	-1,051.30
SWL_G_SIS_5_5	High Grade	Primary	26 Mar 2019	210	3,715	1,327	-3,505.30
SWL_G_SIS_4_1	ROM	Primary	26 Mar 2019	210	731	261	-521.20
SWL_G_SIS_5_3	High Grade	Primary	26 Mar 2019	210	19,275	6,884	-19,264.70
SWL_G_SIS_2_1000	Mineralised Waste	Primary	27 Mar 2019	210	6,257	2,235	-6,242.40
SWL_G_SIS_1_1	Waste	Primary	24 Mar 2019	210	336	331	-79.60
SWL_G_SIS_4_3	ROM	Primary	28 Mar 2019	210	2,350	907	-2,249.60
SWL_G_SIS_5_4	High Grade	Primary	27 Mar 2019	210	17,063	6,074	-16,852.50
SWL_G_SIS_4_2	ROM	Primary	27 Mar 2019	210	2,285	816	-2,076.50
SWL_G_SIS_4_8	ROM	Primary	27 Mar 2019	210	5,643	2,015	-5,433.40

Figure 2 Block list showing block name and remaining tonnes column

The View Block screen will provide a complete overview of the attributes for one block, the model comparison data for that one block and the mining activity undertaken on that block. It is easy to identify if a block has been under or over depleted on the Mining Activity chart and table.

The Models listed in the Model Comparison table will include all available model types in Reconciler. The total % of block for each model will always equal 100% but may be grouped by material type or lithology type.

The Mining Activity section (chart and tables), allows a user to define if the haulage grouping is none (haulage will be displayed for each destination per day), end of month (one haulage total per calendar month) or survey period (one haulage total per survey month).

By viewing the haulage tonnes alongside survey tonnes, it is easy to see if a block has been over depleted or has tonnes remaining on it.

Navigating to the view block screen (Figure 3) can be directly from the Blocks Module or the Blocks List screen. When navigating from the Blocks list screen, the user will have a block automatically loaded into the View Block screen based on the selected block in View Block.

The online guidance has been updated for this module.

Figure 3 Mining Activity chart and table on Block View screen

Role assignments through Windows Active Directory (AD) groups including auto-user creation

Site System Administrators can assign Reconcilor roles to Windows AD groups so that user role assignments can be managed externally.

The Windows AD groups will only be available if they have been configured through an API call by Snowden Consultants (Figure 4).

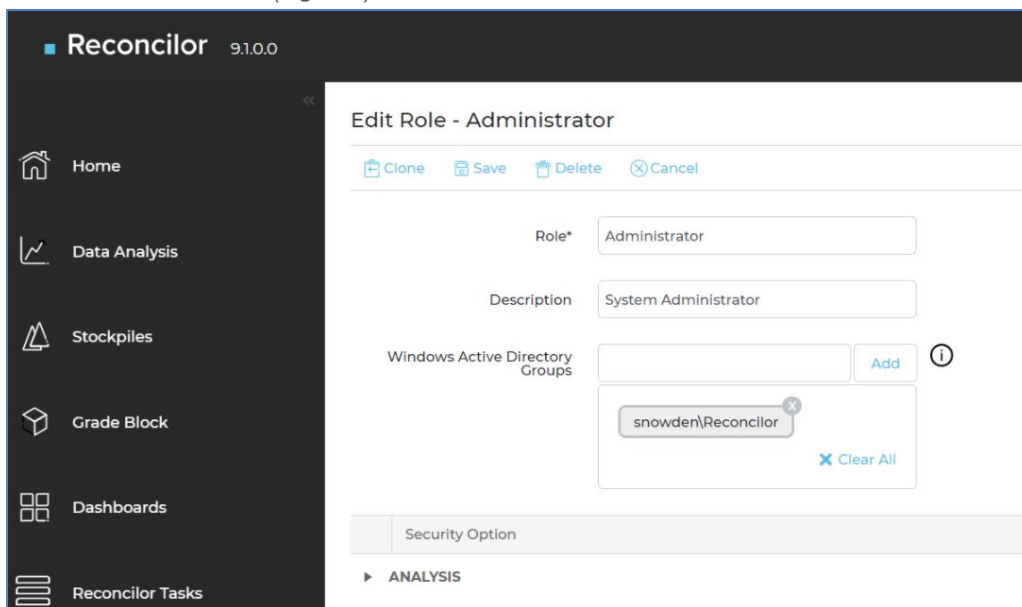

Figure 4 System Settings, Roles

Schedule import jobs with parameters

For any site with multiple source pit / underground locations, there is now the option to schedule an import based on a location. The start date, end date and look back days can also now be defined in the Import Definition Schedule screen.

Schedule

[Edit](#) [Save](#) [Cancel](#)

Day: Mon Tue Wed Thu Fri Sat Sun at 3:53 pm (Australia/Perth)

Every: 0 hours, starting at 3:53 pm (Australia/Perth)

Every: 0 minutes within each hour, starting at 3:00 pm (Australia/Perth)

Import Definition: Haulage Import into Reconcilor

Import Parameters

Define the parameters for this job to be used when querying the source

MineSiteCode*

StartDate*

EndDate*

LookBackDays*

Figure 5 Import Definition – setting schedules

Allow clients to call specific Reconcilor API's externally

Clients wishing to trigger and monitor imports without the need to access Reconcilor is now available. This will be triggered from a middleware/Integration platform and as such won't be using a username/password

The following actions are permitted:

GET	Get import definitions list
GET	Get import Types
GET	Get Import jobs by date range
GET	Get Import jobs by date range and Import Type
GET	Get Import jobs by date range and Import Definition ID
GET	Get Import jobs by date range and Import Definition ID including Deleted
GET	Get Import Health Summary
POST	Add Import Job
GET	Get Import Job Details
POST	Cancel an import job

Figure 6 Reconcilor API's available

ENHANCEMENTS

Continuum now has material type filter

The Continuum has an added filter – material type! This is a multi-select filter and will ensure the ore and waste designations are returning the expected data for your configuration.

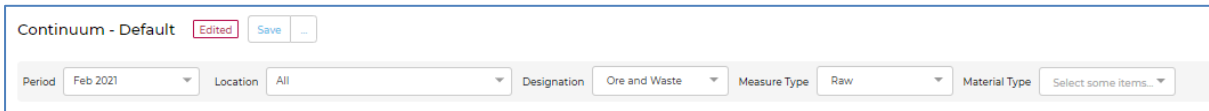

Figure 7 Continuum with material type filter

Material movements crusher to plant diagram dataset filters

A filter has been added to the dataset filters for Stockpiles and Control Points to enable users to specify material movements to or from a selected one of more stockpiles or control points for each metric (Figure 8).

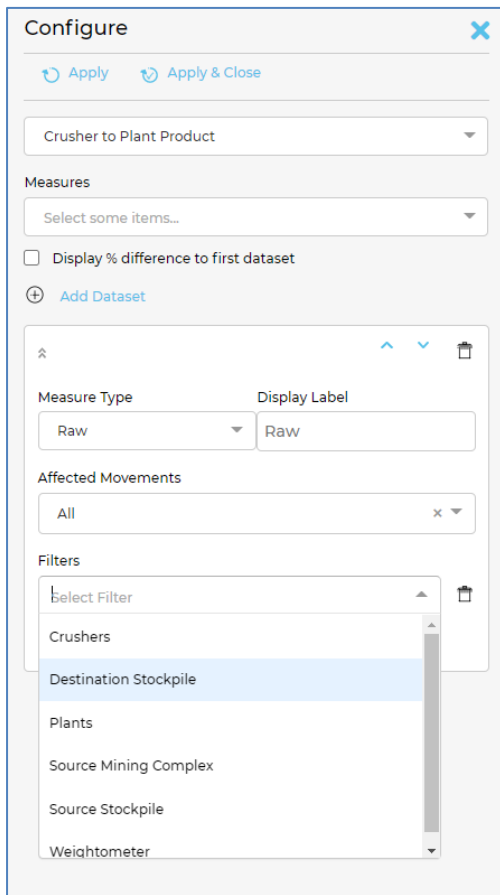

Figure 8 New dataset filters on material movements crusher to plant diagram; destination stockpile, source stockpile and weightometer (control point)

Import configuration rules

Snowden consultants now have the option to modify or “turn off” redundant import health validations. This provides an improved user experience with all import validations being relevant and requiring action. Let us know if there are any validations that are redundant for your site and we will do some configuration around the import health.

MORE INFORMATION

The following general resources are available to help you use your product:

- **Integrated Online Guidance:** your product online guidance (information icon in top right of the User Interface Shell) is your first stop for assistance and contains a wealth of information, including the latest information about this version.
- **Online video tutorials:** check out our YouTube channel for video tutorials for step-by-step guides to some of our more complex features.

<https://youtube.com/Reconcilor>

- **Support Portal:** The Datamine Support Portal allows you to get in touch with our global support teams for direct assistance with any software related issues.

<https://datamine.freshdesk.com/en/support/login>

The support portal also hosts the:

- Reconcilor FAQ's <https://datamine.freshdesk.com/en/support/solutions/Reconcilor/FAQ>
- Reconcilor Basic Troubleshooting
<https://datamine.freshdesk.com/en/support/solutions/Reconcilor/BasicTroubleshooting>
- **Latest version:** The latest 9.1 release version can be upgraded by contacting your Snowden Reconcilor consultant.

RESOLVED TICKETS – RECONCILOR V9.1

A new feature

An enhancement to an existing function or feature

A resolved bug

The following tickets have been resolved since the last released version of Reconcilor:

For more information on individual cases, please refer to your online guidance, or contact your local support representative.

New feature

ID	Type	Description
SM-1953		Role assignment through AD groups
SM-1956		Schedule import jobs with parameters
SM-1965		Auto-user creation
SM-1966		Import parameter date entry
SM-1967		Import parameter list selection
SM-1970		Grade block screen - configure model comparisons
SM-1971		Grade block screen - model comparisons
SM-2322		Online Guidance - Updated for 9.1 Grade block
SM-2456		Allow clients to call specific Reconcilor API's externally

Enhancements

ID	Type	Description
SM-1710		Continuum - add material type filter
SM-1830		Enhancement: Material Movements crusher to plant

SM-1863		Mining Analysis measure type filter
SM-1928		Stockpile Adjustment Add/Edit - Stockpile Selection
SM-1952		Import parameter default values
SM-1954		Import parameter number entry
SM-1962		Grade block screen - mining activity
SM-1964		Spatial analysis – improvements (to be released in v9.1.1)
SM-1968		Configure import validation rules
SM-1974		Custom import validation support
SM-1978		Import into other database schema
SM-2000		Trends analysis - mine plan sorting
SM-2173		Imports - Allow custom processing of import parameters prior to import run (support look-back parameter)
SM-2174		Reconciler - storage of Comparison Values should use Bulk operations
SM-2268		Stockpile Analysis - Stockpile filter must dynamically load stockpiles to remain responsive
SM-2282		Imports: Increase size of staging schema columns for source and destination names to 50
SM-2285		Material Movements - support searchable stockpile filters
SM-2302		Crusher Feed & Mining Analysis - Stockpile group filter required
SM-2356		Trends & Model Comparison - x-axis ordering
SM-2538		Online Guidance - 9.1 Data Health
SM-2540		Online Guidance - 9.1 Pivot View
SM-2553		Online Guidance - 9.1 Data Issue and Logging Settings

Resolved Bugs

ID	Type	Description
SM-1804		Bulk Adjustments doesn't display my previously saved adjustments
SM-1864		Mining Analysis: Compliance diagram issues
SM-1912		Stockpile Analysis > Activity chart Y-axis labels display too many decimal places for stockpile balances
SM-1913		Stockpile Analysis > Activity chart: view a stockpile data with no movements in the selected period
SM-1998		Site name not displaying
SM-2137		Block Model Activations screen issues
SM-2148		Calendar months showing up under wrong year
SM-2152		Control Points: unable to save a control point location
SM-2154		Data Overview: filter default value issues
SM-2157		Data Overview: unable to filter by location
SM-2169		Model Comparison: issues when filtering by 'Designation'
SM-2171		Pivot View: Stockpile cube will not export to excel
SM-2211		Haulage Aliases screen: improve performance when creating a haulage alias for a block
SM-2214		Continuum waterfall - difference showing at 0 on y axis for quantity attributes
SM-2255		Stockpile Analysis - closing balance for every shift mappings
SM-2267		Mining and Crusher Analysis - Shows No Data even when Actual data exists
SM-2289		Trends/Model Comparison screen: show no model survey data when including model design data.
SM-2290		Stockpile Analysis - Performance considerations + individual stockpile and table options
SM-2300		Crusher Feed & Mining Analysis - Stockpiles within multiple groups cause double-counted tonnes

SM-2303		Data Overview: Period selector value is empty
SM-2304		Management screens: there are duplicates in the location selector
SM-2314		System Health Notifications: Last import failed notifications are not clearing as expected
SM-2334		Stockpile Adjustments: stockpile list field doesn't allow selecting most of stockpiles
SM-2335		Stockpile Analysis: Closing Balance chart doesn't display data
SM-2337		Continuum - Horizontal scrollbar disappearing off the bottom of the page
SM-2338		Resource identifiers showing on Data Health Trends screen
SM-2339		Material Movements > Crusher to Plant diagram: filter by source/destination stockpile
SM-2360		Fix trigger on pipeline
SM-2361		When Adding an import job, if you switch to another job, your default params/rules are wiped
SM-2367		Stockpile Management - Last adjustment date
SM-2372		Movements: Grades assigned incorrectly in shifts when average stockpiles end in 0 tonne balance
SM-2379		Material Movements: unable to export planned datasets (Export All option)
SM-2382		Location filter - needs improvement on selected data
SM-2384		Import Schedules cannot be edited through the UI other than hourly or daily
SM-2385		Import Screens fail if modifying schedule cron expressions to 15 mins
SM-2423		Import Definitions/Import Revisions: 500 Server Error
SM-2453		Change the file name for the export-all files in the analysis screens
SM-2459		Pivot View: 500 Server Error when exporting data
SM-2488		Stockpile Management - Lithology type and Material type
SM-2505		Stockpile Adjustments: unable to edit adjustments
SM-2508		Trends - Filters

SM-2520		Material Movements: Export all issues
SM-2521		Pivot view: export issues
SM-2541		Application Settings: Export
SM-2542		Application Settings: Data Issue Settings
SM-2564		User Id required on Import Jobs
SM-2508		Trends - Filters
